1000LP-BASIC-TB

03-16

Model 1000LP

# MODEL 1000LP

## LOW PRESSURE REDUCING REGULATOR

The Model 1000LP is a high capacity, low pressure regulator used to control downstream pressure between 1 and 30 psig (.07 and 2.1 Barg). Sizes are from 1/2" through 1" (DN15 through DN25).

The 1000LP is the low pressure version of the Cashco 1000HP reducing regulator. The designs are essentially equal, except that the 1000LP has a larger diaphragm area which is required for the lower operating pressures.

The unique internal design allows use in a multitude of applications, including process fluids, that normal pressure reducing regulators can not match.

### FEATURES

<b>Streamlined Flow Path:</b>	Straight-thru flow path reduces internal turbulence and resistance to flow, increasing stability and capacity.
<b>High Inlet Pressure Range:</b>	Standard construction allows inlet pressures up to 450 psig (31.0 Barg).
<b>High Outlet Pressures:</b>	Controlled outlet pressure between 1–30 psig (.07–2.1 Barg).
<b>High Pressure Drop:</b>	Standard construction with extended guiding allows pressure drop up to 450 psid (31.0 Bard). This regulator is routinely applied in severe service conditions.
<b>Flow-to-Open Plug:</b>	Provides unmatched rangeability – far greater than competitive flow-to-close designs. Highly stable at either high or low flow rates.
<b>Versatility:</b>	Four available body materials and eighteen trim material selections allow usage in a multitude of various fluids. Optional constructions extend the capability.
<b>Protected Diaphragm Zone:</b>	Internal arrangement isolates the diaphragm from direct impingement, negating any flow induced instability at either low or high flow rates. Allows incorporation of dynamic boost from jet section. Uniformly registers pressure on the diaphragm.

### APPLICATIONS

Used primarily in utilities services—saturated steam, industrial gases, fuel gases, compressed air, or water condensate. Also used in sour gas, chemical and other process services.

Reference Technical Bulletin 1000HP-BASIC-TB for outlet pressures in the range of 10–30 psig (.69–2.1 Barg), as this range overlaps with Model 1000LP.

<b>Body Sizes:</b>	1/2", 3/4", 1"; (DN15, 20, 25).	<b>Outlet Pressure Range:</b>	<b>Pressure Containment –</b> Operating Range <b>Max. Operating –</b> 50 psig (3.44 Barg), <u>internal damage will occur.</u> 40 psig (2.76 Barg), <u>no internal damage.</u>
<b>End Connections:</b>	Standard – NPT female. Opt-31: BSP female. Opt-30: 150# or 300# RF flanged. Opt-32: Extended plain end nipples. Opt-34: 14" Face to Face Flange Dim.		
<b>Body/Spring Chamber Material Combinations:</b>	Uniform – CI/CI, BRZ/BRZ, CS/CS and SST/SST. Combinations – CS/CI, BRZ/CI, SST/CI, and SST/CS.  CI = Cast grey iron CS = Cast carbon steel BRZ = Cast bronze SST = Cast stainless steel		<b>NOTE:</b> 1000LP is flow-to-open (FTO) design; this places a <u>lower</u> limitation on outlet pressure setting for some <u>inlet</u> pressure levels. <b>Metal or Composition Seated Designs:</b> “B_” series trim designations – up to 400 psid (27.6 Bard). “S_” series trim designations – up to 450 psid (31.0 Bard).
	See Table 4 for material specifications		
<b>Trim Designs:</b>	Metal seated or composition seat. Metal or composition diaphragms. “B_” series designations – BRZ, BR, SST; see Table 6 for materials. “S_” series designations – SST, CS; see Table 7 for materials.	<b>Maximum Pressure Drop:</b> Opt-17: $\Delta P = 1 - 5 \text{ psid (.07 - .34 Bard)}$ .	<b>Standard:</b> $\Delta P > 5 \text{ psid (.34 Bard)}$ . <b>Minimum Pressure Drop:</b> Minimum = 1 psid (.07 Bard).
<b>Body/Cylinder Material Combinations:</b>	CI/BRZ, CI/SST. BRZ/BRZ. CS/SST. SST/SST.	<b>Seat Leakage:</b>	Meets ANSI/FCI 70-2. <u>Metal Seated</u> – Class IV. <u>Composition Seat</u> – Class VI.
<b>Maximum Inlet Pressure:</b>	Dependent only on cylinder material and type of end connection (See Table 8):  BRZ – 400 psig (27.6 Barg) SST – 450 psig (31.0 Barg)	<b>Capacity:</b>	See Tables 9 through 13 for flow capacity. See Table 2 for “Wide Open Cv”; use for sizing of safety relief device.
	<b>NOTE:</b> 1000LP is a flow-to-open (FTO) design; this places an <u>upper</u> limitation on <u>inlet</u> pressure for a given <u>outlet</u> pressure setting.	<b>Range Springs:</b>	Epoxy coated steel.
	For body/cylinder/spring chamber construction with:  <u>any BRZ materials</u> – -20° to +400°F (-29° to +205°C). <u>any CI materials</u> – -20° to +450°F (-29° to +232°C). <u>all CS or SST materials</u> – -20° to +600°F (-29° to +315°C).	<b>Diaphragm Flange Bolting:</b>	<b>Standard:</b> High strength, zinc plated, heat treated steel. For <u>all</u> body/spring chamber materials.
	<b>NOTE:</b> Composition trim materials may <u>lower</u> above ranges.	<b>Gaskets:</b>	Required for metal diaphragm constructions only; <u>not</u> required for composition diaphragm construction. <b>Standard:</b> TFE/Alumina Silicate. <b>(Not suitable for oxygen service.)</b> $T_{max} = 450^{\circ}\text{F}$ (232°C). <b>Opt-45:</b> TFE gaskets for oxygen service or as alternate. $T_{max} = 400^{\circ}\text{F}$ (205°C). <b>Opt-46G:</b> Alternate carbon graphite gaskets. $T_{max} = 600^{\circ}$ (315°C).
		<b>Painting:</b>	<b>Standard:</b> All non-corrosion resistant portions to be painted with corrosion resistant epoxy paint per Cashco Spec #S-1606. <b>Alternate:</b> See Opt-95 or -95OS.

## OPTION SPECIFICATIONS

**Option -1:**

CLOSING CAP. A removable ductile iron cap discourages tampering with spring setting. Available only with CI or CS spring chamber materials. Includes a gasket for sealing the closing cap to the spring chamber, a sealing lock nut, and a 1/4" (DN8) NPT female vent connection.

**Option -3:**

MANUAL ADJUSTOR & LOCKING LEVER. Use when frequent spring range settings are required. Adjusting screw has handwheel fixed to end, and locking nut is replaced by a locking lever that is easily loosened/tightened.

**Option -12:**

REDUCED PORT ORIFICE. Used when high inlet pressure negates use of the standard full port orifice. Also used when oversized body is desired to accommodate piping size. Available in metal seated or composition seat materials, in all "B\_" or "S\_" series trim designations, and in all body sizes. See Tables 10 and 12 for flow capacity in Cv's and maximum inlet pressure.

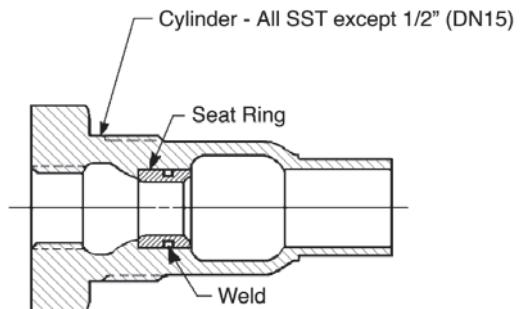

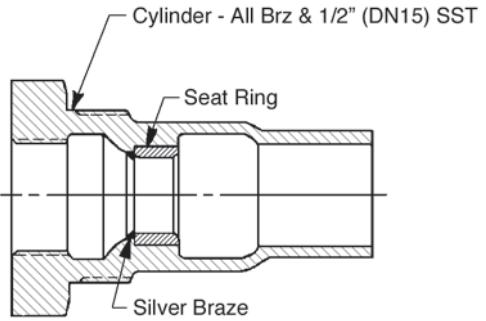

**Option -14:**

INTEGRAL SEAT. Standard pressed-in seat ring-to-cylinder joint is sealed as a path of leakage by brazing or welding. The procedure also serves as a permanent joint for flow conditions where service conditions are "severe", subject to vibration, or thermal cycling.

Seat ring is silver brazed to cylinder for "B\_" series **composition** trim designations, and to 1/2" (DN15) body size cylinders with "S\_" series trim designations. For all other body sizes with "S\_" series designations the seat ring is welded to the cylinder.

Recommended for all hydrogen or helium applications. Recommended when pressure drop exceeds 300 psid (20.7 Bard).

**NOTE:** Opt-14 is included whenever Opt-15, stellited seat is specified.

Opt -14 Integral Seat

**Option -15:**

STELLITED SEAT SURFACES. Available with metal seated S1 trim only, and with full port orifice or Opt-12 reduced port orifice. Both plug face and seat ring's seat edge are coated with stellite hard surfacing using a flame spray process. Always includes integral seat ring Opt-14. Required for applications when:

1. Liquid flow is flashing and when both outlet pressure  $P_2 \leq 30$  psig (2.1 Bard) and  $\Delta P > 50$  psid (3.5 Bard).
2. Steam service when  $\Delta P > 300$  psid (20.7 Bard).
3. 2-phase flow (liquid + vapor i.e. "wet" steam) at inlet.

**Option -17:**

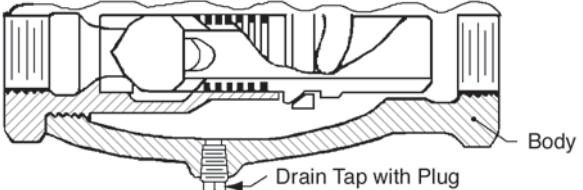

PISTON SPRING. Required for applications where pressure drop is less than 5 psid (.34 Bard). Minimizes plug/cylinder frictional effects. 302 SST material only.

**Option -25:**

REMOTE VENTING. Use with hazardous or explosive gases where personnel/equipment safety is at issue when a diaphragm leak occurs. 1/4" (DN8) NPT female connection in spring chamber for piping.

**Option -25S:**

VENT SCREEN: Cap (For Opt-25).

<b>Option -26:</b>	<u>DRAIN HOLE.</u> 1/4" (DN8) NPT drain tap with plug in body underside. Recommend use with highly viscous fluids (above 100 centipoise (Cp)) for downstream piping pressure sensing. Plug material similar to body material. Recommended for flashing liquids.	<b>Option -34:</b>	<u>SPECIAL 14" FACE TO FACE DIMENSION FOR FLANGED END CONNECTIONS.</u> See Opt.-30 for standard face to face dimension.
		<b>Option -40:</b>	<u>NACE CONSTRUCTION.</u> Internal wetted portions meet NACE standard MR0175 for application in sour gas service. Exterior of the unit to not be directly exposed to a sour gas environment, buried, insulated or otherwise denied direct atmospheric exposure. <u>CS/CS or SST/CS body/spring chamber materials ONLY.</u> Acceptable ONLY with S40, S40V, S3, or S3N trim. Not available with Opt-14, Opt-15, or Opt-17.
<b>Option -27:</b>	<u>VISCOUS LIQUID SERVICE.</u> Incorporates special valve plug with drilled openings near the "jet effect" zone to stabilize operation for fluids with viscosity greater than 100 Cp. <u>Brass or SST metal seated trim ONLY.</u>	<b>Option -45:</b>	<u>PTFE/SILICATE GASKET.</u> Primarily for oxygen service. Limits temperature range to -20° to +400°F (-29° to +205°C). (A gasket is <u>not</u> required when applying a composition diaphragm.)
<b>Option -30:</b>	<u>FLANGED END CONNECTIONS.</u> CS or SST body materials only. Flange and pipe nipple materials of same general chemistry as body material. Available as 150# RF or 300# RF flange configurations. Requires lapped joint-type flange on inlet (cylinder) end. Pipe nipples socket welded to body and cylinder. Outlet connection flange is socket weld-type. See Table 8 for lowered P vs T ratings. (Suitable for NACE service with post-weld, stress relief, heat treatment).	<b>Option -46G:</b>	<u>HIGH TEMPERATURE GASKETS.</u> CS or SST body/spring chamber materials only. Utilizes carbon graphite gaskets over standard gaskets. Primarily applied at temperatures over 400°F (205°C) or at customer's request; range of -20° to +600°F (-29° to +315°C).
<b>Option -31:</b>	<u>BSP SCREWED END CONNECTIONS.</u> British Standard Pipe threads per ISO 7/1; used as alternate to NPT ends. Available all sizes and body materials.	<b>Option -55:</b>	<u>SPECIAL CLEANING.</u> BRZ or SST body materials ONLY. Cleaning per Cashco Spec #S-1134 for Oxygen gas Service. <b>NOTE:</b> Design Pressure Rating shall not exceed 375 psig (25.8 Barg) when body material is SST and process medium is oxygen.
<b>Option -32:</b>	<u>EXTENDED P.E. NIPPLES.</u> Schedule 80 plain end pipe nipples used for field butt or socket welding into pipeline. Pipe nipples of same general chemistry as body material. Short-threaded pipe nipples seal welded to body and cylinder. Adds approximately 8 inches (200 mm) to the face-to-face dimension of standard unit. Use for socket weld pipe systems.	<b>Option -56:</b>	<u>SPECIAL CLEANING.</u> Cleaning per Cashco Spec #S-1542. <u>Not</u> suitable for Oxygen Service.
		<b>Option -95:</b>	<u>EPOXY PAINT.</u> Special epoxy painting of all non-corrosion resistant external surfaces per Cashco Spec #S-1547. Utilized in harsh atmospheric conditions.
		<b>Option -95OS:</b>	<u>EPOXY PAINT.</u> Special epoxy painting of all non-corrosion resistant external surfaces per Cashco Spec #S-1687 for OFFSHORE installations.

## TECHNICAL SPECIFICATIONS

**TABLE 1**  
**RECOMMENDED PRESSURE DROP**  
**VS. TRIM DESIGN/MATERIALS**

**NOTE:** Consult Factory with Application Details For  $\Delta P$ 's > 450 psid (31 Bard)

**NOTE:** Cashco, Inc. does not recommend metal seated trim on any service where the flow will be dead ended downstream of the pressure reducing regulator.

Fluid	Maximum Inlet Pressure		Operating Pressure Drop Range		Seat Design	Basic Trim Materials	Trim Designation Numbers

<sup>1</sup> For constructions containing following materials as the body, spring chamber, or cylinder, the pressure vs. temperature limits are based upon:

Material	ASME Specification No.
BRZ	B31.3
CI	B31.3
CS	B31.3
SST	B31.3

- <sup>2</sup> Requires use of Opt-46G, high temperature gasket for temperatures from +450 to +600°F (+232 to +315°C).  
<sup>3</sup> Internal damage will occur; pressure containment will be maintained.

**TABLE 4**  
**MATERIAL SPECIFICATIONS OF**  
**BODY, SPRING CHAMBER AND CYLINDER**

MATERIAL	ASTM Specifications
BRZ - cast bronze	B62, Alloy 83600; 85% Cu, 5% Sn, 5% Pb, 5% Zn
CI- cast iron	A126, Class B
CS - cast carbon steel	A216, Gr. WCB
SST - cast stainless steel	A351, Gr. CF8M (cast 316 SST)

**TABLE 5**  
**APPLICATIONS**

Fluid	Recommended Construction	Trim Number <sup>1</sup>
Air or Inert Gases	Metal Seat & Diaphragm Composition Seat & Diaphragm Composition Seat & Metal Diaphragm Metal Seat & Composition Diaphragm	B1 BB, BK, <b>B2</b> , B3, S3N, SB, S40V B5 S2N
Oxygen <sup>2</sup>	Composition Seat & Metal Diaphragm	<b>B5</b> , S36
Liquids	Metal Seat & Diaphragm Composition Seat & Diaphragm	B1, S1 BB, BK, <b>B2</b> , B3, S3N, SB, S40V
Chemicals	Metal Seat & Composition Diaphragm Metal Seat & Diaphragm Composition Seat & Diaphragm Composition Seat & Metal Diaphragm	S5, S40 <sup>3</sup> S0 S3, S40V S9, S36
Sour Gas/Crude	Metal Seat & Composition Diaphragm	S40
Sour Gas/Crude	Composition Seat & Diaphragm	S3, S3N, S40V
Fuel Oil <sup>‡</sup>	Composition Seat & Diaphragm	BB, BK, SB, S40V
Hydrocarbon Gas or Liquids <sup>‡</sup>	Composition Seat & Diaphragm	BB, BK, S3, S3N, SB, S40V
Steam, Saturated or Superheated	Metal Seat & Diaphragm	<b>S2</b> , B1, S1
Water and Condensate, Low Temp. (32-180°F) (0-83°C)	Composition Seat & Diaphragm Metal Seat & Diaphragm	BB, BK, <b>B2</b> , B3, <b>S3</b> , S3N, SB, S40V S2N
Water and Condensate, High Temp. (180-300°F) (83-149°C)	Metal Seat & Diaphragm	<b>S1</b> , B1, S2

<sup>1</sup> S1 trim is available with stellite faced plug and valve seat (Opt. -15).

<sup>2</sup> Oxygen service requires specifying Opt-55, and using BRZ or SST body materials ONLY.

<sup>3</sup> Specify S40 trim for NACE service.

Note: Trim Designation Nos. in "boldface" are the most commonly used. Cashco, or its representatives may make recommendations or suggestions as to the suitability of certain trims for specific services. These are trims that have been used successfully in the past in similar applications. However, the user has final responsibility for materials selected.

<sup>‡</sup> In accordance with ASME B31.3 "process piping", do not use Cast Iron Body for hydrocarbon or flammable fluid service with inlet pressures greater than 150 psig (10.3 Barg) or temperatures greater than 300° F (149° C).

<sup>1</sup> Indicated outlet pressure limits are those to contain overpressure conditions; such overpressure should not cause internals damage. It is recommended that pressure safety devices – safety relief valve or rupture disc – have their setpoint relief pressures at 120% of the UVRS (UVRS = "Upper Value of Range Spring"). Example: For a 12–30 psig (.83–2.1 Barg) range spring, the safety device should be set to relieve at  $120\% \times 30 \text{ psig} = 36 \text{ psig}$  (2.5 Barg).

<sup>2</sup> For all material/trim combinations, the 1000LP diaphragm pusher plate and rocker arm mechanical internals design are the limiting factors.

<sup>3</sup> Pressure integrity will be maintained up to 150 psig (10.3 Barg). Up to 40 psig (2.8 Barg), no internals damage will occur; above 45 psig (3.1 Barg) internals damage will occur.

**TABLE 9**  
**Cv – FLOW CAPACITY**

**FULL PORT – COMPOSITION DIAPHRAGM**

Based on 400 psid (27.6 Bard) max pressure drop limit for composition seat,  
and on 450 psid (31.0 Bard) for metal seat.

$$(F_L = 0.93)$$

- NOTES:**
1. Where "HI P<sub>1</sub>" is indicated, the inlet pressure exceeds the limit established in Table 9.
  2. Where "HI P<sub>2</sub>" is indicated, the maximum outlet pressure is exceeded.
  3. Where "SONIC" is indicated, flow will be approximately the last indicated value in the column above "SONIC". The outlet velocity with Schedule 160 pipe has reached sonic velocity of 1118 fps. Additional flow cannot be obtained, and pipeline velocity is in excess of customary pipe velocity design limits.
